**SEEKING 20,000 ACRES OF LAND SUITABLE
FOR COMMERCIAL AGRICULTURE**

Jenga Tanzania Agriculture Limited (Jenga Tanzania) want to purchase at least 20,000 acres farmland for large scale commercial mechanized agriculture.

Though the preferred farmland is either one or two farms totaling at least 20,000 acres, considerations will be made for up to four nearby individual farms averaging 5,000-acres each.

Crops of interest are sunflower, maize (corn), soya beans, and wheat. Sunflower oil processing plant, and 12,000 Tons storage silos will be built on site.

Potential farms will be selected based on the following criteria:

1. Accessibility - Preference will be given to the farm which is accessible all year round. We are willing to perform minor repairs to improve accessibility.

2. Electric grid • We prefer a farm which is less than 5 KM from the nearby source of three phase electricity. Irrigation Potential - We prefer to be near by a permanent source of water such as river for irrigation. Irrigation permit will need to be secured for this to be counted as a criterion during selection.

4. Topography - The land should be mostly flat or with few manageable hills to allow mechanized agriculture.

5. Additional advantages: Access to natural gas, access to electricity and access road.

We welcome those with land meeting some or all the above criteria to submit their inquiries along with a note describing their land, its agriculture potential and proposed price.
